

Our Learning Adventure

Spring Term 2

In nursery, we talk to the children about 'going on an adventure'. This relates to the learning that they will be doing through their play. This term we will be going on the following adventures:

This half term we will be looking at 'What do we need to grow?' We will be looking at how plants grow and change. You could support this by talking to your child about the changes you can see in the plants that are growing in your garden, or ones that you can see on your way to nursery.

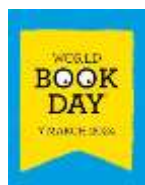

Our core story this half term is 'Handa's Surprise'. We will be thinking about what happens in the story and the different fruits that Handa has in her basket. You could watch the story on Youtube if you do not have the book. You could talk to your child about what fruits they would like in their basket.

We will be taking part in the Primary Engineering Award over the coming weeks, which will involve an engineer coming into nursery to talk to the children. We will be designing our own bridges and sending our designs in to be assessed by engineers. You could talk to your child about things in the environment that an engineer would have been involved in, like traffic lights, cars, bridges that you may cross and buildings that you see.

We will be talking to the children about how we look after our environment and in particular how we keep it tidy. You talk to your child about the litter you may see when you are out walking with your child and how we should put things in the bin.

In nursery, we love listening to stories and reading books. We will read lots of different stories over the next 5 weeks. We would like to challenge you and your child to read as many stories as you can, over the same period of time. You could post pictures of you and your child reading each different book on Tapestry. Let us know how many you manage to read.

Don't forget that you can tell us about what your child is are learning at home using
